Imperial College London

Bioengineering Year in Industry Assignment Brief 2026/27

Assessment of your Year in Industry placement will be by 4 quarterly reports and one final presentation on your return to College.

Quarterly Reports

You are required to write four 500-750 word reports reflecting on your experience and what you have learned from your placement. These reports should follow the broad headings on the Learning Outcomes document for the Year in Industry described below. Each report should identify key skills and new knowledge which you have developed during your placement. You should offer examples of skills and new knowledge which you have developed and reflect on what you have learned. These examples might be drawn from projects on which you have worked on or reports you have written or presentations given or from reflections on the dynamics of the teams of which you are a member.

Presentation

On returning to college at the start of the new academic year you will be required to give a presentation about your Year in Industry.

Learning Outcomes:

By the end of this programme students will be better able to:

First Report

1. **Apply and develop engineering knowledge to the analysis, design and solution of problems.**

- Identify, use and synthesise **skills and knowledge** from across undergraduate course and apply this to workplace problems.
- Develop **new skills and knowledge** and apply these to the workplace.
- Identify the processes of **project scoping, management and delivery** (e.g., developing a client brief, project definition, project scoping, costing and resource allocation, development of timeframes, and risk analysis, use of prototyping and processes of testing, amending, reviewing and project delivery etc.)
- Apply problem solving skills and use **innovative/creative/lateral/ thinking** in solutions and projects.

Second Report

2. **Personal Responsibility and Effectiveness**

- Identify, agree, set, reflect on and assess the delivery of workplace **objectives**.
- Utilise **feedback** from wide range of sources as a tool to increase professional competence.
- Identify workplace **team dynamics** and reflect on effectiveness of **personal contribution** to teams
- Demonstrate an understanding of the **business context** in which projects are delivered.

Third Report

3. **Use communication skills effectively**

- Collate, organise, analyse, document, comment on and explain information.
- Communicate information, data, analysis, findings, work progress, challenges using media (reports, graphical representation, models, and presentations) most appropriate to a range of audiences (e.g. team, line managers, clients, academics, fellow students).
- Ability identifying workplace problems and issues and make effective use of feedback.
- Able to use appropriate communication skills to effect change.

Fourth Report

4. Ability to identify and work with codes of conduct, including health and safety regulations, ethical and environmental considerations.

- Identify the regulatory / legal / health and safety frameworks within which work is conducted.
- Identify ethical problems in the workplace and reflect on those problems and reason the most appropriate individual course of action.
- Assess the environmental impact of projects and work.
- Make effective use of organisations and networks to support professional development.

Presentation after returning to College at the end of the Year in Industry

5. Able to use presentation skills to explain work placement roles and achievements

- Summarise and explain context, roles and achievements in work
- Able to structure a presentation
- Able to use presentation tools and material and appropriate body language
- Able to summarise and deal with questions

Grading:

Please see separate grading sheet for information about the criteria by which your reports will be marked.

Submission Deadlines:

To be agreed with Industrial Liaison Manager

Return of work:

Two weeks after submission deadline for each report.
